

In re Patent Application of:

**DAIR ET AL.**

Serial No. 10/833,238

Filed: April 10, 2001

---

IN THE CLAIMS

1. (original) A fiber optic module for coupling photons between optoelectronic devices and optical fibers, the fiber optic module comprising:

a base;

a back plane including a horizontal and vertical array of edge connectors and a connector to couple to a host system;

a horizontal and vertical array of printed circuit boards each having an edge connector and an optoelectronic device coupled thereto in parallel to the optical axis of the optoelectronic device, the horizontal and vertical array of printed circuit boards each having its respective edge connector coupled to the respective horizontal and vertical array of edge connectors of the back plane; and

a shielded housing coupled to the base to encase the plurality of printed circuit boards to reduce electromagnetic interference (EMI).

2. (original) The fiber optic module of claim 1 further comprising:

an optical block coupled to each of the optoelectronic devices of the horizontal and vertical array of printed circuit boards, the optical block having

a horizontal and vertical array of openings to receive each of the optoelectronic devices of the horizontal and vertical array of printed circuit boards, and

a horizontal and vertical array of lenses to couple photons between each of the optoelectronic devices of the horizontal and vertical array of printed circuit boards and a plurality of optical fibers respectively.

In re Patent Application of:

**DAIR ET AL.**

Serial No. **10/833,238**

Filed: **April 10, 2001**

---

3. (original) The fiber optic module of claim 2 further comprising:
- a nose to receive an optical fiber connector and to hold the plurality of optical fibers substantially fixed and aligned with the horizontal and vertical array of openings of the optical block.
4. (original) The fiber optic module of claim 3 further comprising:
- a nose shield surrounding the nose to reduce electromagnetic interference.
5. (original) The fiber optic module of claim 1 wherein, the back plane includes traces between the horizontal and vertical array of edge connectors and the host connector.
6. (original) The fiber optic module of claim 1 wherein, the connector is a plurality of pins.
7. (original) The fiber optic module of claim 1 wherein, the connector is an electrical connector including a plurality of pins.
8. (original) The fiber optic module of claim 1 wherein, the horizontal and vertical array of printed circuit boards is a horizontal and vertical array of vertical printed circuit boards.
9. (original) The fiber optic module of claim 8 wherein, the horizontal and vertical array of vertical printed circuit boards are each arranged perpendicular to the base and

In re Patent Application of:  
**DAIR ET AL.**  
Serial No. 10/833,238  
Filed: April 10, 2001

---

parallel to each other to form a horizontal and vertical array of fiber optical channels.

10. (withdrawn) The fiber optic module of claim 1 wherein, the horizontal and vertical array of printed circuit boards is a horizontal and vertical array of horizontal printed circuit boards.

11. (withdrawn) The fiber optic module of claim 10 wherein, the horizontal and vertical array of horizontal printed circuit boards are each arranged parallel to the base and to each other to form a horizontal and vertical array of fiber optical channels.

12. (withdrawn) The fiber optic module of claim 1 wherein, the horizontal and vertical array of printed circuit boards is a horizontal and vertical array of slanted printed circuit boards.

13. (withdrawn) The fiber optic module of claim 12 wherein, the horizontal and vertical array of slanted printed circuit boards are each arranged parallel to each other to form a horizontal and vertical array of fiber optical channels.

14. (withdrawn) The fiber optic module of claim 1 wherein, the horizontal and vertical array of printed circuit boards is a combination of of slanted printed circuit boards and vertical printed circuit boards.

15. (withdrawn) The fiber optic module of claim 1 wherein,

In re Patent Application of:

**DAIR ET AL.**

Serial No. **10/833,238**

Filed: **April 10, 2001**

---

the horizontal and vertical array of printed circuit boards is a combination of of slanted printed circuit boards and horizontal printed circuit boards.

16. (withdrawn) The fiber optic module of claim 1 wherein, the horizontal and vertical array of printed circuit boards is a combination of of vertical printed circuit boards and horizontal printed circuit boards.

17. (withdrawn) The fiber optic module of claim 1 wherein, the horizontal and vertical array of printed circuit boards is a combination of of vertical printed circuit boards, horizontal printed circuit boards and slanted printed circuit boards.

18. (original) The fiber optic module of claim 1 wherein, each of the printed circuit boards includes a ground plane on one side.

19. (original) The fiber optic module of claim 1 wherein, the connector is a plurality of pins to couple to the host system.

20. (original) The fiber optic module of claim 1 wherein, the connector is an electrical connector to plug into an electrical connector of the host system to connect thereto.

21. (original) The fiber optic module of claim 1 wherein, some optoelectronic devices of the horizontal and vertical array of printed circuit boards are coupled thereto using a through hole mount configuration; and

In re Patent Application of:

**DAIR ET AL.**

Serial No. 10/833,238

Filed: **April 10, 2001**

---

other optoelectronic devices of the horizontal and vertical array of printed circuit boards are coupled thereto using a straddle mount configuration.

22. (original) A fiber optic module for coupling photons between optoelectronic devices and optical fibers, the fiber optic module comprising:

- a base;

- a back plane including a horizontal and vertical array of edge connectors and a host connector to couple to a host system;

- a horizontal and vertical array of vertical printed circuit boards each having an edge connector and an optoelectronic device coupled thereto in parallel to the optical axis of the optoelectronic device, the horizontal and vertical array of vertical printed circuit boards each having its respective edge connector coupled to the respective edge connector of the back plane; and

- a cover coupled to the base to protect the horizontal and vertical array of vertical printed circuit boards.

23. (original) The fiber optic module of claim 22 further comprising:

- an optical block coupled to each of the optoelectronic devices of the horizontal and vertical array of vertical printed circuit boards, the optical block having

- a horizontal and vertical array of openings to receive each of the optoelectronic devices of the horizontal and vertical array of vertical printed circuit boards, and

- a horizontal and vertical array of lenses to couple photons between each of the optoelectronic devices of the

---

horizontal and vertical array of vertical printed circuit boards and a plurality of optical fibers respectively.

24. (original) The fiber optic module of claim 23 further comprising:

a nose to receive an optical fiber connector and to hold the plurality of optical fibers substantially fixed and aligned with the horizontal and vertical array of openings of the optical block.

25. (original) The fiber optic module of claim 24 further comprising:

a nose shield surrounding the nose to reduce electromagnetic interference.

26. (original) The fiber optic module of claim 22 wherein, the back plane includes traces between the horizontal and vertical array of edge connectors and the host connector.

27. (original) The fiber optic module of claim 22 wherein, the host connector is a plurality of pins.

28. (original) The fiber optic module of claim 22 wherein, the host connector is an electrical connector including a plurality of pins.

29. (original) The fiber optic module of claim 22 further comprising:

a horizontal and vertical array of optical blocks coupled to each of the optoelectronic devices of the horizontal and vertical array of vertical printed circuit boards, the

In re Patent Application of:

---

horizontal and vertical array of optical blocks having

a horizontal and vertical array of openings to receive each of the optoelectronic devices of the horizontal and vertical array of vertical printed circuit boards, and

a horizontal and vertical array of lenses to couple photons between each of the optoelectronic devices of the horizontal and vertical array of vertical printed circuit boards and a plurality of optical fibers respectively.

30. (original) The fiber optic module of claim 29 further comprising:

a nose to receive an optical fiber connector and to hold the plurality of optical fibers substantially fixed and aligned with the horizontal and vertical array of openings of the optical block.

31. (original) The fiber optic module of claim 30 further comprising:

a nose shield surrounding the nose to reduce electromagnetic interference.

32. (original) The fiber optic module of claim 22 wherein, the cover is a shielded cover which is conductive.

33. (original) The fiber optic module of claim 22 wherein, each of the vertical printed circuit boards includes a ground plane on one side.

34. (original) The fiber optic module of claim 22 wherein, each optoelectronic device of the horizontal and vertical array of vertical printed circuit boards is coupled thereto

In re Patent Application of:

**DAIR ET AL.**

Serial No. **10/833,238**

using a straddle mount configuration.

35. (original) The fiber optic module of claim 22 wherein, each optoelectronic device of the horizontal and vertical array of vertical printed circuit boards is coupled thereto using a through hole mount configuration.

36. (original) The fiber optic module of claim 22 wherein, some optoelectronic devices of the horizontal and vertical array of vertical printed circuit boards are coupled thereto using a through hole mount configuration; and other optoelectronic devices of the horizontal and vertical array of vertical printed circuit boards are coupled thereto using a straddle mount configuration.

37. (original) The fiber optic module of claim 22 wherein, each of the plurality of vertical printed circuit boards is perpendicular to the base to form a horizontal and vertical array of fiber optic channels.

38. (withdrawn) A fiber optic module for coupling photons between optoelectronic devices and optical fibers, the fiber optic module comprising:

- a base;
- a back plane including a horizontal and vertical array of edge connectors and a host connector to couple to a host system;
- a horizontal and vertical array of horizontal printed circuit boards each having an edge connector and an optoelectronic device coupled thereto in parallel to the optical axis of the optoelectronic device, the horizontal and

---

vertical array of horizontal printed circuit boards each having its respective edge connector coupled to the horizontal and vertical array of edge connectors of the back plane respectively; and

a housing coupled to the base to protect the horizontal and vertical array of horizontal printed circuit boards.

39. (withdrawn) The fiber optic module of claim 38 further comprising:

an optical block coupled to each of the optoelectronic devices of the horizontal and vertical array of horizontal printed circuit boards, the optical block having

a plurality of openings to receive each of the optoelectronic devices of the horizontal and vertical array of horizontal printed circuit boards, and

a plurality of lenses to couple photons between each of the optoelectronic devices of the horizontal and vertical array of horizontal printed circuit boards and a plurality of optical fibers respectively.

40. (withdrawn) The fiber optic module of claim 39 further comprising:

a nose to receive an optical fiber connector and to hold the plurality of optical fibers substantially fixed and aligned with the horizontal and vertical array of openings of the optical block.

41. (withdrawn) The fiber optic module of claim 40 further comprising:

a nose shield surrounding the nose to reduce electromagnetic interference.

In re Patent Application of:

---

42. (withdrawn) The fiber optic module of claim 38 wherein, the back plane includes traces between the horizontal and vertical array of edge connectors and the host connector.

43. (withdrawn) The fiber optic module of claim 38 wherein, the host connector is a plurality of pins.

44. (withdrawn) The fiber optic module of claim 38 wherein, the host connector is an electrical connector including a plurality of pins.

45. (withdrawn) The fiber optic module of claim 38 further comprising:

an array of optical blocks coupled to each of the optoelectronic devices of the horizontal and vertical array of horizontal printed circuit boards, the array of optical blocks having

an array of openings to receive each of the optoelectronic devices of the horizontal and vertical array of horizontal printed circuit boards, and

an array of lenses to couple photons between each of the optoelectronic devices of the horizontal and vertical array of horizontal printed circuit boards and a plurality of optical fibers respectively.

46. (withdrawn) The fiber optic module of claim 45 further comprising:

a nose to receive an optical fiber connector and to hold the plurality of optical fibers substantially fixed and aligned with the array of openings of the array of optical blocks.

In re Patent Application of:

**DAIR ET AL.**

Serial No. 10/833,238

---

47. (withdrawn) The fiber optic module of claim 46 further comprising:

a nose shield surrounding the nose to reduce electromagnetic interference.

48. (withdrawn) The fiber optic module of claim 38 wherein, the housing is a shielded housing which is conductive.

49. (withdrawn) The fiber optic module of claim 38 wherein, each of the horizontal and vertical array of horizontal printed circuit boards includes a ground plane on one side.

50. (withdrawn) The fiber optic module of claim 38 wherein, each of the edge connectors of the horizontal and vertical array of horizontal printed circuit boards includes one or more staggered pads to plug in the printed circuit board when the hot.

51. (original) A fiber optic module for coupling photons between optoelectronic devices and optical fibers, the fiber optic module comprising:

a base;

a back plane including a plurality of edge connectors and a host connector to couple to a host system;

a horizontal and vertical array of printed circuit boards each having an edge connector and an optoelectronic device coupled thereto in parallel to the optical axis of the optoelectronic device, each of the respective edge connectors of the horizontal and vertical array of printed circuit boards having staggered pads to couple to respective edge connectors of the back plane when powered up; and

In re Patent Application of:

**DAIR ET AL.**

Serial No. 10/833,238

Filed: April 10, 2001

---

a housing coupled to the base to protect the horizontal and vertical array of printed circuit boards.

52. (original) The fiber optic module of claim 51 further comprising:

an optical block coupled to each of the optoelectronic devices of the horizontal and vertical array of printed circuit boards, the optical block having

a horizontal and vertical array of openings to receive each of the optoelectronic devices of the horizontal and vertical array of printed circuit boards, and

a plurality of lenses to couple photons between each of the optoelectronic devices of the horizontal and vertical array of printed circuit boards and a plurality of optical fibers respectively.

53. (original) The fiber optic module of claim 52 further comprising:

a nose to receive an optical fiber connector and to hold the plurality of optical fibers substantially fixed and aligned with the horizontal and vertical array of openings of the optical block.

54. (original) The fiber optic module of claim 53 further comprising:

a nose shield surrounding the nose to reduce electromagnetic interference.

55. (original) The fiber optic module of claim 51 wherein, the back plane includes traces between the horizontal and vertical array of edge connectors and the host connector.

In re Patent Application of:

**DAIR ET AL.**

---

56. (original) The fiber optic module of claim 51 wherein,  
the host connector is a plurality of pins.

57. (original) The fiber optic module of claim 51 wherein,  
the host connector is an electrical connector including a  
plurality of pins.

58. (original) The fiber optic module of claim 51 wherein,  
the horizontal and vertical array of printed circuit  
boards is a horizontal and vertical array of vertical printed  
circuit boards.

59. (original) The fiber optic module of claim 58 wherein,  
the horizontal and vertical array of printed circuit  
boards are a plurality of vertical printed circuit boards each  
arranged perpendicular to the base and parallel to each other  
to form a horizontal and vertical array of fiber optical  
channels.

60. (original) The fiber optic module of claim 58 wherein,  
the horizontal and vertical array of printed circuit  
boards are a plurality of vertical printed circuit boards each  
arranged perpendicular to the base to form a horizontal and  
vertical array of fiber optical channels.

61. (withdrawn) The fiber optic module of claim 51 wherein,  
the horizontal and vertical array of printed circuit  
boards is a horizontal and vertical array of horizontal  
printed circuit boards.

62. (withdrawn) The fiber optic module of claim 61 wherein,

In re Patent Application of:

**DAIR ET AL.**

Serial No. **10/833,238**

Filed: **April 10, 2001**

---

the horizontal and vertical array of horizontal printed circuit boards are each arranged parallel to the base to form a horizontal and vertical array of fiber optical channels.

63. (withdrawn) The fiber optic module of claim 61 wherein, the horizontal and vertical array of horizontal printed circuit boards are each arranged parallel to the base and to each other to form a horizontal and vertical array of fiber optical channels.

64. (withdrawn) The fiber optic module of claim 61 wherein, the horizontal and vertical array of printed circuit boards is a horizontal and vertical array of slanted printed circuit boards.

65. (withdrawn) The fiber optic module of claim 64 wherein, the horizontal and vertical array of slanted printed circuit boards are each arranged parallel to each other to form a horizontal and vertical array of fiber optical channels.

66. (withdrawn) The fiber optic module of claim 64 wherein, the horizontal and vertical array of slanted printed circuit boards are each arranged parallel to each other and on the angle with the base to form a horizontal and vertical array of fiber optical channels.

67. (withdrawn) The fiber optic module of claim 51 wherein, the horizontal and vertical array of printed circuit boards is a combination of of slanted printed circuit boards and vertical printed circuit boards.
